

1. 🧠 PRODUCT VISION

I am a Product Manager who builds real products, not just concepts.

MAKE IT IN FRENCH

My goal with this portfolio is to:

- showcase my ability to identify real user problems
- design MVP solutions
- ship functional products
- think like a product builder, not just a strategist

I want recruiters and companies to feel:

- impressed by the execution
- intrigued by the product thinking
- confident that I can build and ship quickly

Positioning:

Product Manager specialized in building AI tools, gaming products, and real-world MVPs.

This portfolio should NOT feel like a traditional portfolio.

It should feel like a **product platform where projects are experiences**.

2. 🎬 PROJECTS DATA

1. Overwatch Counter Picker

- Tag: Gaming / Tool
 - Description: Helps players choose the best hero based on team composition
 - Problem: Players lose games due to poor hero selection and lack of matchup knowledge
 - Solution: Suggests optimal hero picks based on the current game situation
 - Status: MVP in progress
 - Why I built this: Personal frustration while playing ranked games
-

2. FOODER (Tinder for Food)

- Tag: Mobile / Food / Discovery

- Description: Swipe-based app to discover restaurants based on budget and preferences
 - Problem: Choosing where to eat is time-consuming and overwhelming
 - Solution: Users set preferences (budget, type), then swipe restaurants like Tinder
 - Status: MVP concept / prototype
 - Why I built this: Wanted a faster and more fun way to choose restaurants
-

3. Cinemovies

- Tag: Utility / Local / Movie
 - Description: Aggregates all movies currently showing in cinemas in Toulouse
 - Problem: Users need to check multiple cinema websites to see all available movies
 - Solution: One platform showing all movies across all cinemas
 - Status: Functional MVP
 - Why I built this: Personal need to discover all movies, not just from one cinema brand
-

4. Spotify Concert Tracker

- Tag: Music / API / Tool
 - Description: Tracks concerts of artists the user listens to
 - Problem: Fans miss concerts because information is scattered
 - Solution: Connects Spotify data with concert listings
 - Status: MVP in progress
 - Why I built this: I often miss concerts from artists I like
-

5. Spotify Product Use Case

- Tag: Product Thinking / Case Study
 - Description: Analysis of a Spotify feature with proposed improvement
 - Problem: Identifies a product limitation or missed opportunity
 - Solution: Proposes a new feature with product reasoning
 - Status: Completed case study (HTML page)
 - Why I built this: To demonstrate product thinking and feature design skills
-

6. Artisan Plumber Application

- Tag: SaaS / Local Business
- Description: Tool for plumbers to manage their activity
- Problem: Small artisans lack simple digital tools
- Solution: Lightweight application tailored to their workflow

- Status: MVP
 - Why I built this: Real-world use case for small business digitalization
-

7. Caviste Website

- Tag: Web / Local Business
 - Description: Website for a local wine shop
 - Problem: Lack of online presence
 - Solution: Clean and simple website to showcase products and information
 - Status: Completed
 - Why I built this: Help a local business improve visibility
-

3. 🎨 INSPIRATIONS

I want the design and experience to be inspired by:

- Netflix (content browsing, hover previews, immersive experience)
- Shopify Editions (smooth storytelling, fluid scroll, product reveal)

Key elements I like:

- fluid transitions
- strong visual storytelling
- clear hierarchy
- premium feel

I want a mix of:

- exploration (Netflix)
 - narrative (Shopify Editions)
-

4. 🎨 DESIGN GUIDELINES

Style:

- Dark, cinematic, premium
- Minimal but impactful
- Tech + subtle gaming vibe

Colors:

- Background: deep black (#0B0B0B)

- Text: off-white
- Accent: electric blue or purple

Typography:

- Clean modern font (Inter or similar)
- Strong hierarchy (big bold headings)

UI Principles:

- no clutter
 - perfect spacing
 - high readability
-

5. ✨ EXPERIENCE REQUIREMENTS

The portfolio must feel like a real product.

Homepage:

- immersive hero section
- smooth entrance animations

Main section:

- Netflix-style project catalog
- categories (Gaming, AI, Tools, etc.)

Project cards:

- hover interaction
- autoplay video preview (muted)
- short description
- tags

Project page:

- large hero video
 - problem → solution → product thinking
 - CTA: “Try the product”
-

6. 🎥 MEDIA

Video is a core part of the experience.

- Each project should support a video preview
 - Use placeholder videos if needed
 - Design for autoplay on hover
-

7. WHAT TO AVOID

- generic AI-generated UI
 - boring portfolio layouts
 - too many unnecessary animations
 - lack of storytelling
 - template-like design
-

8. FINAL EXPECTATION

This should feel like:

- a product
- an experience
- a premium portfolio

Not just a list of projects.
